EPO-TEK® H20E-SLR-HV Advantages & Suggested Application Notes:

- Strengths include dispensable rheology, fast cure, electrical contact resistance similar to solder and a long pot life.
- Enhanced green strength for holding ribbons in position prior to cure.
- Optimized viscosity for large needle dispensing.
- Photovoltaic Suggested Applications:
 - Electrically conductive stringing of thin film, organic and crystalline Si solar cells.
 - Compatible with SnCu and AgCu metalized solar ribbons, and TCO substrates such as ITO, ZnO and SnO.
 - Versatility in ribbon bonding geometries, such as dotted or continuous line.
 - In-line/in-situ curing processes in <1 minute at 140°C can be achieved.
 - Reliable green strength holds solar ribbons in position prior to cure.
 - Low temperature cure is well suited for CIGS and OPV/DSC solar cells requiring a low temperature process.
 - EVA film lamination post processing such as 150°C/15-30 minutes enhances performance properties.
 - Suitable for use on IEC 61646, IEC 61730 and UL 1703 certified solar panels.
