**Technical Data Sheet**

**For Reference Only**

**Biocompatible/Spectrally Transparent Epoxy**

**ISO 10993 Tested/Fully Compliant**

---

**Date:** September 2018  
**Rev:** IV  
**No. of Components:** Two  
**Mix Ratio by Weight:** 20 : 5  
**Specific Gravity:** Part A: 1.15 Part B: 0.87  
**Pot Life:** 1-2 Hours  
**Shelf Life- Bulk:** One year at room temperature

**Biocompatible Certified Cure:** 65°C / 1 Hour

*Alternative biocompatible cure schedules may be possible, but have not been certified. Contact med@epotek.com with any questions.*

---

**NOTES:**
- Container(s) should be kept closed when not in use.
- Filled systems should be stirred thoroughly before mixing and prior to use.
- Performance properties (rheology, conductivity, others) of the product may vary from those stated on the data sheet when bi-pak/syringe packaging or post-processing of any kind is performed. Epoxy’s warranties shall not apply to any products that have been reprocessed or repackaged from Epoxy’s delivered status/container into any other containers of any kind, including but not limited to syringes, bi-paks, cartridges, pouches, tubes, capsules, films or other packages.
- Syringe packaging will impact initial viscosity and effective pot life, potentially beyond stated parameters.
- **TOTAL MASS SHOULD NOT EXCEED 25 GRAMS**

**Product Description:** EPO-TEK® MED-301 is a biocompatible, spectrally transparent, very low viscosity, room temperature curing epoxy. Additional characteristics are: self-leveling, short pot-life, and ease of application, either by dispensing or manual operation. EPO-TEK® MED 301 is used often in molding headers in pacemakers, cochlear implants and neurostimulator implants, as well as bonding in many other types of medical devices. When longer pot-life, lower stress and large-scale manufacturing is needed, EPO-TEK® MED 301-2 can usually be interchanged.

**Typical Properties:**
- Cure condition: 65°C / 1 Hour
- Different batches, conditions & applications yield differing results. Data below is not guaranteed. To be used as a guide only, not as a specification. * denotes test on lot acceptance basis

Selected Applications for EPO-TEK® MED-301

Fiber and Electro-Optics
- Impregnating fiber optic image bundles and light guides; adhesive for flexible endoscopes; adhesion to Vyton® rubber and plastic optical fibers
- Transmission of VIS and NIR light signals in camera/video electro optics
- 3D Dentistry camera and imaging tools
- General, all-purpose fiber optic assembly and repair adhesive

Radiation and Imaging
- Adhesive for scintillator crystal array fabrication
- Opto-underfills between scintillator and photodiode array, for medical/dental imaging equipment

Ultrasound/Ultrasonic
- Adhesive for catheter delivered surgical mapping and imaging catheters
- Front-end ultrasound fabrication adhesive responsible for PZT arrays
- General all-purpose ultrasound probe repair adhesive

Life Sciences and MicroFluidics
- Enabling microfluidic drug delivery via catheter devices; micro-motors and ultrasonics for sensing liquid and gas flow rates
- Adhesive for active optical alignment in spectrophotometry, fluoroscopy and microscopy
- General adhesive for specialized diagnostic equipment

Device and Diagnostics
- Potting resin over LD and PD chips in pulsed oximetry
- Adhesive for gas analyzers, flow meters, pressure and pH monitoring catheters
- Fabrication of glucose sensors; implantable or external
- Potting, over-coating and weather proofing for activity trackers (wearable devices including fitness watches)
- Patient monitoring electrodes and cables including: ECG and temperature probes

Implantable Devices
- Molding headers over implantable microelectronic packages in ICDs, pacemakers and cochlear implants
- Potting Cu coils and motors used in LVAD and BiVAD blood pumps
- Adhesive for ophthalmic implants; plastic bonding in intraocular lens ( IOL ), septum bonding and final assembly for diabetic implants; gluing bio-polymers used for IOP drainage; smart drug delivery of pharmaceuticals
- Header potting for neurostimulators/neuromodulators used for epilepsy, Parkinson’s, pain management and sleep apnea control

Surgical Tools
- Hand held UV cure light guide for curing dental fillings
- Potting PCBs into metals shafts of hand held orthopedic instruments
- Laser optics (surgical tool for optometry)
- Adhesive for neurovascular surgical probes, electrodes and delivery systems.
- Fabrication of Rf Ablation catheters with structural bonding to PEEBAX®

Strength of MED-301 with Disinfectant Soaking

MED-301 Test Conditions
- Adhesive cured: 65°C/2hrs
- Surfaces: 2mm x 2mm ceramic onto glass substrates
- 1 cycle defined as 20 min exposure
- 500 cycles for GA - estimated
- 500 cycles for PAA - estimated

Sterilization Information

- Epoxy performance is most influenced by surface preparation and cleanliness, overall process and handling, and finally proper curing selection. While bulk samples of MED-301 may resist sterilization technologies such as autoclave steam, gaseous technologies, gamma radiation and liquid disinfectants, the glue joints may differ. All users need to determine the suitability of MED-301 for their given application.
- MED-301 is generally regarded for resisting few cycles of ETO and gamma radiation.
- MED-301 can survive more than 500 cycles of liquid sterilization based on glutaraldehyde (3.4% concentration) and more than 500 cycles of peracetic acid (0.23% concentration) before significant deterioration of the glue joint.

Packaging Availability

- EPO-TEK® MED-301 is available in specialty packaging such as Pre-Mixed Frozen Syringes (PMF), Bi-Paks, or bulk (A & B containers).
- A Bi-Pak video tutorial can be found here: http://www.epotek.com/site/technical-material/application-video-tutorials/117-effective-handling-and-mixing-of-epo-tek®-bi-packs.html
- A video tutorial on handling frozen syringes can be found here: http://www.epotek.com/site/technical-material/application-video-tutorials/231-proper-receiving-and-thawing.html

Biocompatibility Approvals

- EPO-TEK® MED-301 cured at 65°C for 1 hour has been tested and is ISO 10993 Certified, meeting Hemolysis (10993-4), Cytotoxicity (10993-5), Implantation (10993-6) for two weeks, and also for twelve weeks, Intracutaneous (10993-10), Sensitization (10993-10) and Systemic Toxicity (10993-11) test protocols.
