EPO-TEK® MED-320
Technical Data Sheet
For Reference Only
Biocompatible/Opaque Epoxy
ISO 10993-5 Tested/Compliant

Date: September 2018
Biocompatible Certified Cure: 65°C / 1 Hour
Rev: IV
Alternative biocompatible cure schedules may be possible, but have not been certified. Contact med@epotek.com
No. of Components: Two
with any questions.
Mix Ratio by Weight: 10 : 2
Specific Gravity: Part A: 1.10 Part B: 0.87
Pot Life: 1 Hour
Shelf Life- Bulk: One year at room temperature

NOTES:
• Container(s) should be kept closed when not in use.
• Filled systems should be stirred thoroughly before mixing and prior to use.
• Performance properties (rheology, conductivity, others) of the product may vary from those stated on the data sheet when bi-pak/syringe packaging or post-processing of any kind is performed. Epoxy’s warranties shall not apply to any products that have been reprocessed or repackaged from Epoxy’s delivered status/container into any other containers of any kind, including but not limited to syringes, bi-paks, cartridges, pouches, tubes, capsules, films or other packages.
• Syringe packaging will impact initial viscosity and effective pot life, potentially beyond stated parameters.
• TOTAL MASS SHOULD NOT EXCEED 25 GRAMS

Product Description: EPO-TEK® MED-320 is a black, biocompatible, thixotropic, low temperature curing, optically opaque epoxy for fiber optics, camera and photonic packaging, often used in bonding/potting/sealing of optics used in various medical imaging electronics.

Typical Properties: Cure condition: 65°C / 1 Hour Different batches, conditions & applications yield differing results.
Data below is not guaranteed. To be used as a guide only, not as a specification. * denotes test on lot acceptance basis

Fiber and Electro-Optics

- Opaque, light blocking adhesive (UV/VIS/IR) with fiber optic lighting, camera and video circuits and cabling
- Widely used epoxy at the distal tip of endoscopes, potting and sealing LEDs, lens, CMOS camera chips, irrigational canals, and cup shaped metals and plastics parts
- A general purpose adhesive for endoscope aftermarket repairs and services, as well as light guides and headlights
- Low or room temperature curing epoxy resin chemistry is ideal for disposable applications including plastic optical fibers, catheter tubing, thermoplastics and elastomers
- Slightly electrically conductive epoxy enables shielding of EMI/IR radiation from polluting the VIS light optics
- Enabling surgical lasers and endoscopes, MED-320 received an "excellent compatibility rating" with Sterrad® (no damage 100 cycles) sterilization process

Biocompatibility Approvals

- EPO-TEK® MED-320 cured at 65° for 1 hour has been tested and is ISO 10993-5 certified (Cytotoxicity testing by MEM Elution methodology).

Device, Diagnostics and Wearables

- IR opaque adhesive for thermography and blood gas analysis in patient monitoring
- Suggested adhesive for wearable electronics including skin patch diabetic monitoring, via plastic optical waveguides, and fitness style activity watches

Sterilization Information

- Epoxy performance is most influenced by surface preparation and cleanliness, overall process and handling, and finally proper curing selection. While bulk samples of MED-320 may resist sterilization technologies such as autoclave steam, gaseous technologies, gamma radiation and liquid disinfectants, the glue joints may differ. All users need to determine the suitability of MED-320 for their given application.
- MED-320 can resist a few cycles of autoclave, ETO and gamma sterilization.
- A report from Advanced Sterilization Products®, a division of Ethicon US, LLC, a Johnson & Johnson Company, suggests MED-320 is compatible with 500 cycles of Sterrad® with no leakage:
  See Technical Paper # 59: Compatibility of Medical Devices and Materials with Low Temperature Hydrogen Peroxide Gas Plasma for more information:

Packaging Availability

- EPO-TEK® MED-320 is available in specialty packaging such as Bi-Paks, or bulk (A & B containers).
- A Bi-Pak video tutorial can be found here:
