Biocompatible/Electrically Conductive (ECA), Silver Epoxy
ISO 10993 Tested/Fully Compliant

Date: September 2018
Rev: IV
No. of Components: Two
Mix Ratio by Weight: 1 : 1
Specific Gravity: Part A: 2.03 Part B: 3.07
Pot Life: 2.5 Days
Shelf Life- Bulk: One year at room temperature

NOTES:
● Container(s) should be kept closed when not in use.
● Filled systems should be stirred thoroughly before mixing and prior to use.
● Performance properties (rheology, conductivity, others) of the product may vary from those stated on the data sheet when bi-pak/syringe packaging or post-processing of any kind is performed. Epoxy’s warranties shall not apply to any products that have been reprocessed or repackaged from Epoxy’s delivered status/container into any other containers of any kind, including but not limited to syringes, bi-paks, cartridges, pouches, tubes, capsules, films or other packages.

Product Description: EPO-TEK® MED-H20E is a biocompatible, silver-filled epoxy with electrical and high thermal conductivity. It is a well characterized and relied upon ECA, with over 40 years of successful design use. It is versatile in curing techniques; from box oven, to IR, to hot plate, to convection ovens and is used for circuit connections. Some typical applications are: pacemaker hybrid circuits, X-rays, ultrasound, and hearing aids using MEM or hybrid technology.

Typical Properties: Cure condition: 150°C / 1.5 Hours

Data below is not guaranteed. To be used as a guide only, not as a specification. * denotes test on lot acceptance basis

PHYSICAL PROPERTIES:

<table>
<thead>
<tr>
<th>Property</th>

Fiber and Electro-Optical
- Die-attaching LED chips in surgical lighting products, whether light guides or headlamps
- A very shiny and reflective metal appearance, suitable as "opto-mirrors" found in fiber optic sensor/catheter devices
- As a very high thermal conductor, it is an excellent choice for thermal management and TIM applications, in LEDs and lasers

Radiation and Imaging
- MED-H20E is an Electrically Conductive Adhesive (ECA) used in X-ray detection technologies with scintillator crystal and photodiode arrays as it can be easily dispensed, stamped or screen printed onto PCB/substrates, using direct chip or flip chip attachment processes
- Also used in Ultrasound: PZT/Ferro-electronics using ECA for PZT/Au connections to matching PCB, for ultrasound imaging arrays, vibration resistant adhesive

Adhesive Applications for EPO-TEK® MED-H20E

- Chip on Board Die Attach (COB)
- Heat-Sink
- Thermal Interface Material (TIM)
- IC-Packaging of MEMS Devices
  - Pressure Sensors
  - Accelerometers

- General PCB Level ECA
- Solder Replacement

Devices, Implantable Devices and Diagnostics
- MED-H20E is a world leading ECA for in hybrid circuit assembly and hermetically sealed microelectronics for multiple types of implants such as: cardiac, cerebral, spinal, ophthalmic, neurostimulator and cochlear
- Used in electrically contacting chips, SMDs, PCBs, ground and lead-wires; suggested contacts include: Au, Ag, AgPd, Pt, PtIr, SST and nitinol
- Connecting RFID chips to their antenna coil, whether an implant or an endoscope capsule
- A favorite ECA among ISO 13485 medical devices contract manufacturers
- Commonly used ECA for hearing aids using hybrid, ECM or MEMs technology

Surgical Tools
- Connecting RFID chips to their antenna coil for instrument tracking through sterilization cycles

Selected Applications for EPO-TEK® MED-H20E

Adhesive Applications for EPO-TEK® MED-H20E

- Flip Chip Assembly
- Photodiode Arrays for CT and X-ray Detectors
- Photonics and Lasers
  - Low Thermal Resistance
  - CMOS/CCD Image Sensors and Camera
- Hermetic Packaging Implants
- Hybrid Circuit Assembly
- Quartz Crystal Oscillators
- SMD and Die Attach

- General PCB Level ECA
- Solder Replacement

- Chip on Board Die Attach (COB)
- Heat-Sink
- Thermal Interface Material (TIM)
- IC-Packaging of MEMS Devices
  - Pressure Sensors
  - Accelerometers
- Photonics and Lasers
  - Low Thermal Resistance
  - CMOS/CCD Image Sensors and Camera
- Hermetic Packaging Implants
- Hybrid Circuit Assembly
- Quartz Crystal Oscillators
- SMD and Die Attach

Biocompatibility Approval

- EPO-TEK® MED-H20E cured at 150°C for 1.5 hours has been tested and is ISO 10993 certified, meeting Hemolysis (10993-4), Cytotoxicity (10993-5), Implantation (10993-6), Intracutaneous (10993-10), Sensitization (10993-10) and Systemic Toxicity (10993-11) test protocols.

Sterilization Notes

- MED-H20E contains silver which should never be exposed to moisture or bio-fluids since an oxide layer will form, compromising performance and reliability. Therefore it should always be protected, via semiconductor packaging methods, isolating it from its hostile sterilization environments such as: ETO, autoclave and Vaporized Hydrogen Peroxide (VHP) plasma.

Packaging Availability

- EPO-TEK® MED-H20E is available in specialty packaging such as Pre-Mixed Frozen Syringes (PMF), Bi-Paks, or bulk (A & B containers).
